The importance of refreshment hygiene

The water you drink shouldn't just taste fresh – it must be fresh and completely free of contamination. If not handled correctly, water dispensing makes an ideal home for bacteria. This is a significant concern, especially in environments where hygiene is key, and it's essential that refreshment systems eliminate the dangers and deliver just what's intended: pure refreshment.

At Borg & Overström, users' health is our top priority. Which is why we operate Totality™ for complete peace of mind, perfectly complementing our commitment to Direct Chill coolers as the safe way to dispense water.

Sterizen™

Laboratory certified 99.999% bacteria-free

Before leaving our factory, every Borg & Overström appliance undergoes an anti-microbial, anti-pathogen, sanitising procedure. This bacteria-eliminating process is Sterizen™.

No other make of watercooler goes through this factory sterilisation process, which is why only Borg & Overström coolers are laboratory-certified to be 99.999% bacteria-free when leaving the factory.

Fynil™

Biofilm, limescale and impact resistant epoxy resin panel finish

Many surfaces unwittingly offer homes to a multitude of bacteria, especially inside scuffs and scrapes. This is why Borg & Overström appliances have a double-coated surface of Fynil™.

This scratch and impact resistant epoxy-resin material resists biofilm development and limescale cohesion for increased hygiene and longevity.

Viovandt™

Ultraviolet sterilising system

Ultraviolet light destroys bacteria in water. Unlike chemical additives, it does this without affecting the water's taste or purity, simply delivering the freshest of drinking water.

Viovandt™ is our directed UV light that shines through the water as it is dispensed, adding a further level of hygiene.

3M Filtration

World-class purification

For a superior drinking experience, Borg & Overström appliances can be pre-fitted with a 3M filter to reduce sediment, chlorine, odours and scale.

Recognised as a market leader, 3M filters provide the additional assurance, alongside the Borg & Overström Totality™ system, that drinking water is of the highest standard.
