Introducing the E6 Chilled
only to Kings College
Hospital, London, with
FreshGround.

 FreshGround

Objective

FreshGround needed to provide their customer, Kings College Hospital, London, with a complete drinking water solution for providing clean, filtered, safe drinking water for their patients, staff and visitors. Due to infection control and Legionella concerns around communal water dispensers, patients and visitors were struggling to find free access to water in waiting rooms and public areas. Where hygiene is vitally important, the hospital especially needed a drinking water unit to meet the stringent water quality standards of the NHS.

Solution

FreshGround provided Kings College Hospital with a complete drinking water solution with E6 Chilled only, T3 taps and E7 dispensers. The T3 and E7 were installed in nurses' stations and waiting areas, while the E6 Chilled only dispensers were placed in high-traffic wards with patients at greater risk of infection, ensuring clean water for patients, visitors and staff.

Designed to meet NHS standards, the E6 Chilled only dispenser offers a hygienic, touch-free hydration solution with a single water pathway, providing a safe and reliable source of water.

Feedback

'The thing I like most about the Borg & Overström unit is providing drinking water in a clean and sterile way, people can't interfere with the unit and introduce any bacteria into it. There's peace of mind that comes with knowing we have access to hygienic and safe drinking water for patients. It's also good that they take re-fillable bottles rather than disposable cups, helping with sustainability goals.'

Mark Wilkins, Associate Director for Kings College Hospital
